

EESOF LICENSE TOOLS INSTALLER FOR WINDOWS

Description:

The *EEsof License Tools Installer for Windows* contains the latest version of the EEsof license server manager, utilities and documentation. This includes the license wizard, license preferences tool, license information tool along with Imgrd, Imutil and agileesofd vendor daemon for the license server.

Installation:

To install the latest version of the EEsof license tools simply run the EEsof license tools installer executable.

Note, the license tools need to be installed in a separate location from any EEsof product installation. By default they are installed in "C:\Program Files\Agilent\EEsof_License_Tools" however they can be located anywhere desired. Once installed all future updates will go to the same location as the original installation. All 2011 and forward EEsof products now use this common set of license tools instead of having a separate copy in each product installation tree. In addition each EEsof product's shortcut menu selection for the various license tools points to this common location.

Contents:

1. License server:

- Imgrd.exe
- agileesofd.exe (*vendor daemon*)

2. EEsof license tools:

- License Setup Wizard
- License Preference Tool
- License Information Tools
- Supporting DLLs, scripts, and help files

3. FLEXnet license utilities:

- Imutil.exe (*command line license server utilities*)
- Imtools.exe (*graphical user interface to the license server manager*)
- installs.exe (*service installer*)
- FLEXId_Dongle_Driver_Installer.exe (*dongle driver installer*)

INSTALLATION EXAMPLE:

Run: *eelic_install_win32_11.9.1.1.exe*
